HTML, CSS, JavaScript, jQuery, Angular, React, Svelte, MySQL, FireBase, MongoDB, Git, Gulp, Webpack, npm, Bootstrap, Foundation, Sass

Professional Summary

Work Life Limbo, llc – St. Louis, MO
Software Developer

4/2021 — Present

Highlights

- Consulting clients and helping them figure out the requirements of their needs in web development and help them get up and running.
- Making websites responsive and mobile friendly using custom CSS3, media queries and/or Bootstrap.
- Building websites with HTML, CSS3, JavaScript and/or using CMS of Wordpress or Jekyll
- Working on Java/Spring applications

New Balance – St. Louis, MO
Web UI Developer

10/2017 — 9/2018

Highlights

- Developed dozens of A/B tests with Javascript and CSS, that offered different UI experiences to users and used Adobe Analytics to track effectiveness in funneling users through the shopping and checking out process.
- Created pixel perfect responsive web pages, banners and components across the New Balance E-commerce website.
- Developed and scheduled HTML, CSS, Javascript content using the Salesforce CMS
- Worked closely with Design, Site Management and Marketing teams, putting out new web content for campaigns for various New Balance products.
- Developed HTML E-mails to help promote campaigns/products.

- Investigated and fixed bugs across the site.

Paradowski Creative – St. Louis, MO
Web Developer

7/2016 — 12/2016

Paradowski Creative is an advertising, digital and promotions agency located in St. Louis, MO. In the past 43 years they have blossomed from a one-man design firm into one of the region's largest marketing service firms.

Highlights

- Worked closely with a design team making carefully crafted photoshop PSD's and created pixel perfect responsive websites using JavaScript, HTML and CSS3
- Planned projects, assessed time and resource needs
- Started and developed custom website projects using WordPress with custom PHP, JavaScript and Sass

crescendo, llc – St. Louis, MO
getMADS Software Developer

10/2015 — 6/2016

getMADS (getMaximizedAppDevSololutions) is a flexible, affordable software development outsourcing service, which offers its customers software development and software testing solutions via local staff. As a member of the team, my position included interfacing with team members and product owners to build clean, functional web and software products.

Highlights

- Built a full stack web application using GIT, Maven/Gradle, MySQL, Java 8, Spring 4, Hibernate and AngularJS
 - Backend framework utilizing Java, Spring and Hibernate/JPA to create a RESTful Service that calls JSON to the front-end
 - Backend data mapping/relationships using JPA and Hibernate annotations.
 - Creating UI design using AngularJS, HTML, custom CSS3 and Bootstrap CSS framework
- Provide applications support, maintenance, debugging and custom coding
- Performed data loads/feeds, data mapping and entity creation
- Interfaced with Product Owner to elicit requirements and turn them into development specs
- Designed and developed custom websites using WordPress, Jekyll and AngularJS
